**ABSTRACT**

*PT XYZ's explosive delivery process stages have various processes that are directly related to large and moving loads. In addition, this activity is also directly related to flammable materials. The purpose of this study was to determine the safety risks involved in PT XYZ's explosive delivery process. In addition, the specific objectives are to know the risk at each stage, the source of the risk in each stage, the exposure and its consequences, and to know the risk management and mitigation strategies the company is doing.*

*This research uses descriptive research with qualitative methods, with the focus of research being: risk identification, risk assessment, risk management strategies and mitigation. The results of this study indicate that in the activity of driving MV trucks to LCT, the level of risk found in this study is **RK: Poverty 1, a percentage of 13% Substantial, 40% Poverty 2, and 37% Acceptable**. The risk management strategy chosen and carried out by the company is **hierarchy of control and mitigation efforts** in 4 ways, namely: **standard Operation Procedure, Plus Task Observation, On The Spot Monitoring, dan Safety Analysis**. Suggestions given are that the company create and risk identification and risk assessment evenly in each activity process, especially at every point of location regarding the focus of employees and vehicle units that are always controlled, and also review if grounded each activity and applies to Standard Operation Procedure if required.*
