against women

ABSTRACT

This study aims to determine the effect of religiosity on the resilience of victims of violence against women in early adulthood in East Kalimantan. The study method uses a quantitative approach. The subjects in this study were 110 people victims of female violence in early adult who were selected using a purposive sampling technique. The data collection method used was the resilience scale and the religiosity scale. The data analysis technique used is simple regression. The results showed that there was a significant effect of religiosity on the resilience of victims of female violence with a value of $F_{count} = 65.930 > F_{table} = 3.93$ and a p value = 0.000 ($p < 0.05$) and had an influence contribution (R^2) is 0.376, which means that 37.6% of the resilience variable for women victims of violence can be explained by religiosity.

ABSTRAK

Penelitian ini bertujuan untuk mengetahui pengaruh religiusitas terhadap resiliensi korban kekerasan perempuan usia dewasa awal di Kalimantan Timur. Metode dalam penelitian menggunakan pendekatan kuantitatif. Subjek penelitian ini adalah 110 orang korban kekerasan perempuan usia dewasa awal di Kalimantan Timur yang dipilih dengan menggunakan teknik purposive sampling. Alat ukur penelitian yang digunakan yaitu skala resiliensi dengan nilai reliabilitas 0,937 dinyatakan reliabel dan skala religiusitas dengan nilai reliabilitas 0,924 dinyatakan reliabel. Teknik analisis data yang digunakan adalah regresi sederhana. Hasil penelitian menunjukkan bahwa terdapat pengaruh yang signifikan antara religiusitas terhadap resiliensi korban kekerasan perempuan dengan nilai F hitung = 65,930 > F tabel = 3,93 dan nilai p = 0,000 ($p < 0,05$) serta memiliki kontribusi pengaruh (R^2) sebesar 0,376 yang berarti bahwa sebesar 37,6% variabel resiliensi korban kekerasan perempuan dapat dijelaskan oleh religiusitas.
