**Artikel Info** **ABSTRACT**

**Harvard Author:** *This research aims to determine the effect of empathy on prosocial behavior in adolescents as bystanders in bullying situations. The subjects of this research were 100 teenagers aged 12-18 years who had witnessed bullying but were not directly involved (bystanders) who were selected using purposive sampling techniques. This research method uses a quantitative approach by collecting data in the form of distributing and filling in the empathy scale and prosocial behavior scale. The data analysis techniques used are simple regression and partial correlation. Based on the tests that have been carried out, the results of the research show that there is a significant influence between empathy and prosocial behavior of 100 subjects with a beta coefficient (β) = 0.687, t value = 9.353 > t table = 1.984 and p value = 0.000 (p < 0.05) which means that empathy has an influence on prosocial behavior in adolescent bystanders in bullying situations with an influence contribution (R<sup>2</sup>) of 47.2%.*

**Keywords:** Empathy, prosocial behavior

**ABSTRAK** **Rata Rata**

Penelitian ini bertujuan untuk mengetahui pengaruh empati terhadap perilaku prososial pada remaja sebagai bystander situasi perundungan. Subjek penelitian ini adalah 100 remaja berusia 12-18 tahun yang pernah menyaksikan perundungan namun tidak terlibat secara langsung (bystander) yang dipilih dengan menggunakan teknik purposive sampling. Metode penelitian ini menggunakan pendekatan kuantitatif dengan pengumpulan data berupa penyebaran dan pengisian skala empati dan skala perilaku prososial. Teknik analisis data yang digunakan adalah regresi sederhana dan korelasi parsial. Berdasarkan uji yang telah dilakukan, hasil penelitian menunjukkan bahwa terdapat pengaruh yang signifikan antara empati terhadap perilaku prososial dari 100 subjek dengan nilai koefisien beta (β) = 0.687, nilai t hitung = 9.353 > t tabel = 1.984 dan nilai p = 0.000 (p < 0.05) yang berarti empati memiliki pengaruh terhadap perilaku prososial pada remaja bystander dalam situasi perundungan dengan kontribusi pengaruh (R<sup>2</sup>) sebesar 47.2%.
