Article Info	ABSTRACT
<b>Article history:</b> Received Revised Accepted	Academic procrastination often occurs in students, especially for students who are also Polri personnel, the existence of work family conflict in Polri students. This study aims to empirically examine whether or not there is a relationship between dual role conflict on academic procrastination of Polri students at Mulawarman University. The method used is correlational quantitative, with the research subject being 96 Polri students studying at Mulawarman University, selected using a total sampling technique. The measuring instrument used in this study is the academic procrastination scale and dual role conflict. Both scales are prepared using the Likert model.
<b>Keywords:</b> Academic procrastination Dual role conflict	The data analysis technique using the Pearson Product Moment correlation test resulted in a calculated $r$ value = 0.584 and $p = 0.000 < 0.05$ . The results of these calculations show that there is a fairly strong relationship between dual role conflict and academic procrastination, meaning that the higher the dual role conflict felt by Polri students, the higher the academic procrastination felt by Polri students at Mulawarman University.
