Article Info	ABSTRACT	
Article history: Received February, 2021 Revised February, 2021 Accepted February, 2021	The subject of this study were adult woman who smoked did electric smoking behavior with a total sample 100 people. The research methodology used smoking behavior scale, lifestyle and health locus of control. Those scales arranged with likert model scale and examined with the using of doubled regression analysis statistic test with SPSS 24.0 for windows. The result of this research showed that there is an effect and significance between lifestyle and health locus of control and smoking behavior with the score $F = 68.355$, $R^2 = 0.585$, and $P = 0.000$. In lifestyle significance impact on smoking behavior with the score $\beta = 1.230$, T count = 10.147, T table = 1.984, and $P = 0.000$. In health locus of control significance impact on smoking behavior with the score $\beta = -1.416$, T count = -11.678, T table = 1.984, and $P = 0.000$. The contribution of the effect between lifestyle and health locus of control with smoking behavior of women elektrik smoker in Samarinda city was in the amount of 0.585 (58,50 percent).	
Keywords: smoking behavior lifestyle health locus of control	ABSTRAK Subjek penelitian ini adalah wanita yang melakukan perilaku merokok elektrik dengan jumlah sampel sebanyak 100 orang. Alat ukur yang digunakan dalam penelitian ini menggunakan skala perilaku merokok, gaya hidup dan health locus of control. Ketiga skala tersebut diukur dengan skala model Likert dan diuji menggunakan analisis regresi berganda. Uji statistik dilakukan dengan bantuan program komputer SPSS (Statistical Packages for Social Science) versi 24.0 for windows. Hasil dari penelitian ini menunjukkan bahwa terdapat pengaruh positif signifikan dengan gaya hidup dan health locus of control dengan perilaku merokok yaitu dengan nilai $F = 68,355$, $R^2 = 0,585$, dan $P = 0,000$. Pada gaya hidup terdapat pengaruh yang signifikan terhadap perilaku merokok dengan nilai $\beta = 1,230$, T hitung = 10,147, T tabel = 1,984, dan $P = 0,000$. Pada health locus of control terdapat pengaruh yang signifikan terhadap perilaku merokok dengan nilai $\beta = -1,416$, T hitung = -11,678, T tabel = 1,984, dan $P = 0,000$. Kontribusi pengaruh gaya hidup dan health locus of control terhadap perilaku merokok pada wanita perokok di kota Samarinda sebesar 0.585 (58,50 persen).
