Article Info	ABSTRACT
<b>Article history:</b> Received - Revised - Accepted -	The high hope of students in achieving academic degrees can encourage students to do grit. This study aims to test empirically whether or not the correlation between hope and grit in Psychology students at Mulawarman University using a quantitative research approach. The subjects of this study were 107 students of the Psychology Study Program at Mulawarman University who were selected using a simple random sampling technique. The measuring instrument used in this study is the grit scale with a reliability value = 0.766 and an expectation scale with a reliability value = 0.812. The data analysis technique uses Kendall's Tau test. The results showed that the value of $r = 0.556$ and $p = 0.000$ ( $p < 0.05$ ). This means that there is a positive and significant correlation between hope and grit in Psychology students at Mulawarman University. The higher of hope, the higher grit of psychology students at Mulawarman University. Students should have clear concepts and goals in life, have a good pathway thinking and agency thinking so that the goals are achieved as expected.
<b>Keywords:</b> Hope; Grit	<b>Kata kunci:</b> Harapan; Grit
