**ABSTRACT:**  
 The theme proposed by the author in this research is the participation of mothers in stunting prevention activities in the Berbas Pantai sub-district, specifically at the results utilization stage. This stage was chosen because the program was created by the government and was not based on the voice of mothers in the research location. In addition, this stage will be analyzed using the participatory action theory proposed by Aronoff. The aim of this research is to explain the participation of mothers who have learned mothers-in-knowledge transfer, the participation of mothers who have learned mothers in parenting practices, the participation of mothers in practicing child literacy and feeding practices. The research method used is descriptive qualitative research with the focus of the research being to determine mothers' participation in the utilization stage of results related to stunting prevention activities. Data collection techniques used in this research include interviews, observations and documentation. Meanwhile, in determining sources, a purposive sampling technique was used. Those who will be key informants are Quality Family Village Teachers and Berbas Pantai Cadres. Meanwhile, the main informants for this research were six mothers who had learned mothers. The additional informants were the South Bontang II Community Health Center and Berbas Pantai Village. The data analysis technique used is an inductive model developed by Miles and Huberman. The research results show that the participation of mothers who have learned with learning as knowledge transfer is at the community level. Mothers' participation in parenting practices is at the community level. The participation of mothers in practicing clean WASH and feeding practices is on the individual level. Based on this, the level of participation varied on the mothers who have learned mothers falls into the individual category.

**Keywords:** Participation, Mothers, Stunting, Toddlers

**ABSTRAK:**  
 Tema yang diangkat oleh penulis dalam penelitian ini adalah mengenai partisipasi ibu dalam kegiatan pencegahan stunting di Kelurahan Berbas Pantai secara khusus pada tahap pemanfaatan hasil. Tahapan ini dipilih karena program tersebut dibuat oleh pemerintah dan tidak lahir atas dasar suara ibu-ibu di lokasi penelitian. Selain itu, tahapan ini akan dianalisis menggunakan teori yang partisipatif yang ditawarkan oleh Aronoff. Tujuan penelitian ini adalah untuk menjelaskan partisipasi ibu yang memiliki belajar transfer pengetahuan, partisipasi ibu yang memiliki belajar parenting dalam praktik pada anak, partisipasi ibu dalam praktik pada hal-hal terkait literasi dan gizi. Adapun metode penelitian yang digunakan untuk penelitian kualitatif deskriptif dengan fokus penelitian adalah menggunakan partisipasi ibu pada tahap pemanfaatan hasil terkait kegiatan pencegahan stunting. Teknik pengumpulan data yang dipakai dalam penelitian ini diantaranya adalah wawancara, observasi, dan dokumentasi. Sementara itu, informan penelitian yang menjadi sumber data primer adalah ibu-ibu yang memiliki belajar transfer pengetahuan. Adapun informan tambahan yakni Puskesmas Bontang Selatan II dan Kelurahan Berbas Pantai. Teknik analisis data yang dipakai adalah model induktif yang dikembangkan Miles dan Huberman. Hasil penelitian menunjukkan bahwa partisipasi ibu yang memiliki belajar transfer pengetahuan berada pada tingkat partisipasi individu. Partisipasi ibu dalam praktik pada anak berada di level komunitas. Partisipasi ibu dalam praktik pada hal-hal terkait literasi dan gizi berada pada tingkat individu. Berdasarkan hal tersebut, level partisipasi ibu yang memiliki belajar stunting anak pada hal-hal terkait literasi dan gizi berada pada tingkat individu.
