Abstract
Currently, many women face challengs in carrying out various roles. Apart from fulfilling their obligations as mothers and partners which include taking care of the family, they also carry out the obligations of their professional careers. The aim of this research is to determine the relationship between work-family conflict and work-related stress in female employees. This research methodology uses a quantitative approach. Participants in this research consisted of 199 female workers who were selected through a purposite selection approach. The data collection strategy useful work stress measures and adapted work-family conflict scales. The data analysis technique used is Parson Product Moment correlation. Research findings indicate an important correlation between work-family conflict and polystress among female employees. It is hoped that the results of this research can make agencies or companies pay more attention to creating a supportive work environment which can increase job satisfaction because if job satisfaction is high, work stress and work-family conflict will decrease.
